

# Enterprise Architect for Model Guardians

Let's Practice using Enterprise Architect

Advanced level applied concept training engagements are designed for individuals who want to leverage industry standards and best practices in their work. These are structured as hybrid training/mentoring engagements where an expert level Sparx Certified consultant from INTEGRATE iT is working virtually or on-site with the administration team for one or more weeks providing a combination of classroom learning (for base concepts), and hands-on mentoring in your operational Sparx environment, working on your company's data. These aren't certification courses that lead to a test and a piece of paper, this is on-the-job training to up-level your staff's performance.

## Model Guardianship and deployment key areas:

- Current State Analysis
- Determine Technology Deployments
- Setting up Database Repository, ProCloud Server, Prolaborate
- Determine Repository Structure
- Security Access and Administration
- Select Frameworks
- Select Diagrams
- Enterprise Architect Profile Generator
- Testing and production
- Mentorship and Training
